

RISK MAPPING®

A Tool for Improving Patient Safety and Reducing Risk

ProAssurance's team of experienced Risk Management Consultants can help you improve patient care and reduce the likelihood of medical incidents that lead to lawsuits. Risk Mapping® helps assess your existing risk-reduction and patient safety activities and provides strategies to enhance your program.

Our ProAssurance Risk Mapping® program involves a detailed on-site risk assessment.

Risk Maps are customized for each organization. Your Risk Map can be focused on high-risk areas or targeted to your specific needs.

It can include:

- High-risk clinical departments
- Medical staff and nursing personnel files
- Medication administration
- Medical record documentation
- Ancillary services
- Quality, risk-reduction, and patient safety initiatives
- Effective communication

The assessment process also includes:

- Interviews with select administrative, clinical, and medical personnel
- A review of medical records, policies and procedures, and other pertinent documents
- An analysis of quality improvement activities
- A tour of your facility

Your Risk Management Consultant will discuss preliminary findings with your facility's leadership at the conclusion of the assessment. You will receive a follow-up report outlining suggested risk-reduction strategies.
